SUMMARY

Third-year B.Tech CSE (AI & ML) student (JNTUH, CGPA 8.7) selected for Intel Unnati and Infosys Springboard Internship 7.0. Builds end-to-end ML systems that combine predictive modeling with optimization, MLOps tooling, and embedded/IoT integration targeting AI Systems, MLOps, and applied ML roles where production judgment and systems thinking matter as much as model accuracy.

PROJECTS

AI-Based Donation Matching System | *FastAPI, Docker, CI/CD, Computer Vision (Infosys Springboard 7.0)*

- Building an end-to-end AI system that takes user-submitted images of donation items, classifies item type and quantity, and matches donations to NGOs that need or handle those specific item categories.
- Architecting for scalability with Docker and a CI/CD pipeline, wrapping the core system as a FastAPI service for production-style integration owning the project end-to-end from CV-based evaluation to deployment.

Production Planning Optimization Pipeline | *Python, PuLP, Scikit-learn, Ensemble Modeling*

- Engineered a 4-SKU forecasting-to-decision pipeline combining a stacking ensemble (positive-constrained ridge meta-model) with Linear Programming (PuLP) to generate prescriptive production plans, not just predictions.
- Iterated the modeling approach across 4 dataset versions (V1–V4), progressively improving benchmark accuracy and plan feasibility bridging predictive ML and operations-research optimization.

Dual-Axis Solar Tracker | *Arduino, Embedded C, Sensor Fusion, Closed-Loop Control*

- Built a dual-axis solar tracking system using differential dual-LDR sensing logic to compute real-time positional error and drive an SG90 servo motor, implementing closed-loop control entirely in embedded C on an Arduino Uno.

Parking Lot Management System | *SQL, Relational Database Design*

- Designed and implemented a full relational database system for parking lot management in pure SQL as a DBMS capstone project, covering schema design, normalization, and query logic.

TECHNICAL SKILLS

Languages: Python, SQL, Embedded C

ML / Data Science: PyTorch, Scikit-learn, Stacking Ensembles, Linear Programming (PuLP), Statistical Modeling

MLOps / Infrastructure: Docker, Kubernetes, GitHub Actions (CI/CD), AWS, GCP, Git/GitHub

Embedded / IoT: Arduino, MQTT, ThingsBoard

Problem Solving: Data Structures & Algorithms, Competitive Programming (LeetCode, Codeforces, NeetCode 150)

PROGRAMS & CERTIFICATIONS

- Intel Unnati - Selected participant, delivered two applied ML projects
- Infosys Springboard Internship 7.0 - Selected participant, building AI-Based Donation Matching System (see Projects); 15 Springboard certifications spanning Generative AI, Deep Learning, NLP, Prompt Engineering, Data Science, GPT-3, and RPA
- Anthropic - AI Fluency: Framework & Foundations; Claude Code in Action
- ServiceNow University / SmartBridge (AICTE) - Virtual Internship: Agentic AI, ServiceNow Administration Fundamentals, CSA Exam Prep
- Emertxe Information Technologies - Embedded Systems & IoT Internship | Cisco Networking Academy — Networking Essentials (CCENT)
- Forage / Deloitte Australia - Data Analytics Job Simulation (data analysis, forensic technology)

LEADERSHIP & INVOLVEMENT

- Event Management Team Lead & Co-Organizer, MLVerse (college ML club), led event planning and execution for club initiatives
- Internshala Student Partner (campus ambassador) | Volunteer, InAmigos

EDUCATION

B.Tech, Computer Science & Engineering (AI & ML)

Vardhaman College of Engineering, Hyderabad (JNTUH) Expected Graduation: 2028 | **CGPA: 8.7**
